Agenda

John Inkster - 9:00-9:20

ArcGIS Online Storymap example - US Breakwater Quarantine Station - Cape Henlopen

A variety of images and maps from the late 1800's to present of the site near Cape Henlopen, Delaware. Highlighting the 1926 aerial photography which was used to approximately locate the buildings from time past to today's State Park.

Nicole Minni – 9:25-9:45

Why is using GIS in our schools so important?

GIS has become a tool used in industries world-wide; from public health, transportation, criminal justice, environmental preservation and protection, education, climate change and more. With the ConnectED Initiative, Esri is offering ArcGIS Desktop and ArcGIS Online to our schools. By introducing this technology to children in the K-12 classroom, we are providing them an opportunity that could last a lifetime.

15 Minute Break

Sean Adkins - 10:00-10:20

Methods for assessing impervious surface water quality treatment

ESRI Presentation

Adam Ziegler and Jason Sealy – 10:25-11:25

ArcGIS Pro

ArcGIS Pro reinvents desktop GIS and is a cornerstone of the ArcGIS platform. Built from the ground up, it puts the map first and foremost. Redesigned with the end-user in mind, ArcGIS Pro will save you time and effort in your daily tasks. In this session, we plan to provide information and demonstrations on the concept of an ArcGIS Pro project, redesigned analysis, increased productivity editing concepts, improved mapping and visualization, and sharing your work with the rest of your organization with ease.

Open Discussion

Have a great day!
