FileZilla

---

Fast Clean Pro will drastically improve the speed, performance and reliability of your computer. Detects & fixes critical PC errors, and will continue to scan PC for errors & warnings until the PC is 100% safe. Your PC will continue to run like new with scheduled cleanings running automatically. Over the course of a computer's lifetime hundreds of entries are left over in the computers registry database. These so-called values and keys refer to files, file types, applications, folders, or start up applications that no longer exist. This may cause countless error messages, slow down of your computer and constant delays. Fast Clean Pro solves these Problems by detecting and fixing registry errors such as: Startup entries that a 3rd party application forgot to delete, which could lead to problems during your computers startup. Invalid file type pointers, which could lead to problems while opening files. Orphaned entries within the list of installed applications, which could lead to problems when installing or uninstalling

By clicking "Accept" you agree to install Fast Clean Pro and to its End User License Agreement and Privacy Policy. This product is fully compatible with your Windows. You can remove the product at any time by using the Add/Remove Programs utility.

**Thank you.**  
**Your download is complete.**

You have successfully downloaded FileZilla. Click on "Install Now" to install the software on your machine.

Later
Install Now

### Step 2 – Install the FileZilla Client Software

Go to the location on your C: Drive that you saved the file to. Double click on the file to begin the install. Accept all defaults for a standard installation:

### Step 3 – Configure the FileZilla Client Program

Choose “**File** → **Site Manager**” to configure the connection.  
Click the “**New Site**” button, type the name EnterpriseGIS.  
Complete the **General** tab with the following information:

**External user:**

**Host:** sftp.dti.Delaware.gov

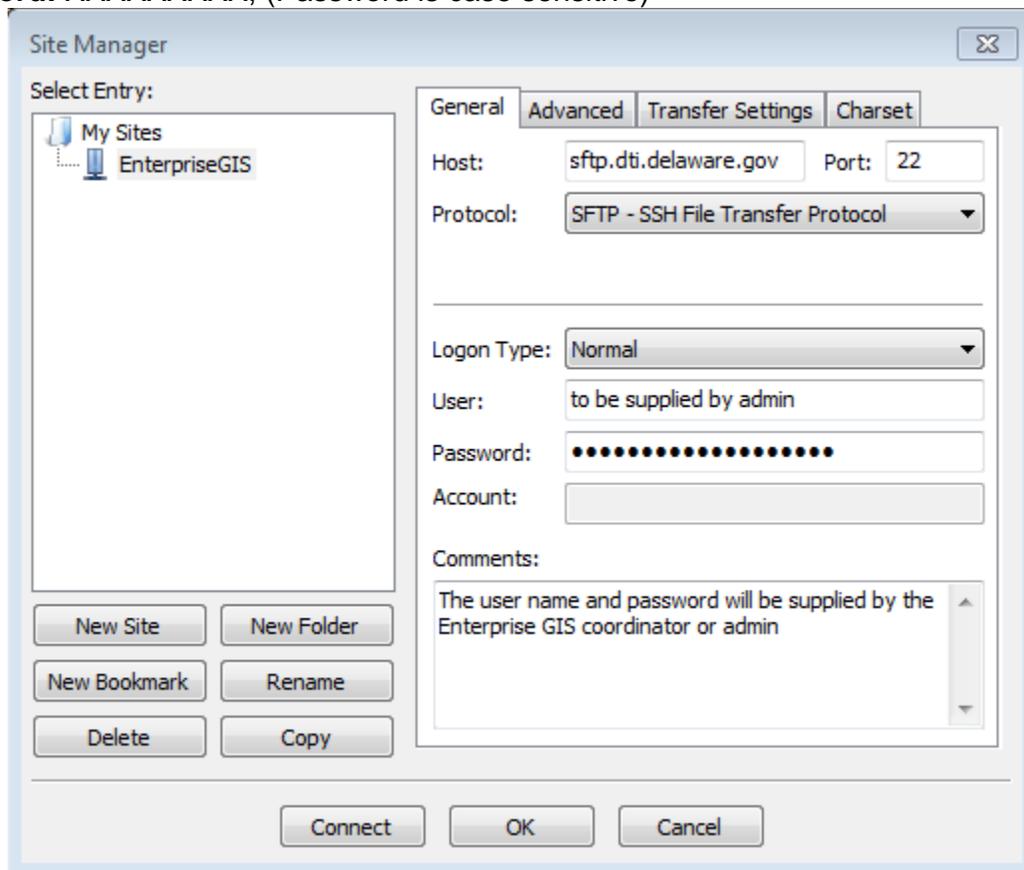

**Port:** 22

**Servertype:** SFTP - SSH File Transfer Protocol

**Logontype:** Normal

**User:** XXXXXXXXXXXX

**Password:** XXXXXXXXXXX, (Password is case sensitive)

Click the “Rename” button and rename this connection to “EnterpriseGIS”

Click OK to return to the “Site Manager” screen, then click “**Save and Exit**” when finished.

### Step 4 – Connecting to the Site

To connect to the ‘EnterpriseGIS’ site, click the drop-down box under the “**File**” menu, and pick your connection:

This will connect you to the ‘Enterprise GIS’ site.
